Noël Pascal Schwabenland

Freelance Applied AI Engineer

Based in Italy · EU-wide · contact@noel.fyi · +39 352 275 4346 · noel.fyi · GitHub · LinkedIn

Summary

I'm an Applied AI Engineer with a background in physics and full-stack development, and more than six years of experience building production software. I help teams turn AI use cases into practical applications, from knowledge and retrieval systems to agents, automation, and custom software. I combine analytical thinking with hands-on engineering and take projects from requirements and architecture through implementation, evaluation, deployment, and handover.

Highlighted Projects

Private AI inference platform @ NetCom Sicherheitstechnik GmbH

2026–2026

AI platform engineering

- Designed and implemented a self-hosted LLM inference platform using vLLM, LiteLLM, Docker, and Kubernetes, covering model serving, request routing, and repeatable deployment workflows.
- Translated privacy, governance, infrastructure, and operational requirements into a maintainable LLMOps architecture for sensitive enterprise workloads.

Elevator emergency dispatch agent @ NetCom Sicherheitstechnik GmbH

2026–2026

Voice AI and critical operations

- Built an on-premise voice AI pipeline combining speech-to-text (STT), LLM agent orchestration, text-to-speech (TTS), FastAPI, and SIP integration for elevator emergency dispatch.
- Implemented structured incident outputs and human-in-the-loop review for a privacy-sensitive, safety-critical operational workflow.

Voting theory research platform @ KPMG AG

2025–2026

Data platform and research software

- Led full-stack delivery of an interactive research platform using Python, FastAPI, Angular, and reproducible data pipelines around high-performance simulations.
- Co-owned frontend and API architecture and stakeholder alignment, enabling researchers to compare, interpret, and communicate simulation results.

Work Experience

NetCom Sicherheitstechnik GmbH

2026–2026

Data Scientist & AI Engineer — Designed and delivered production-oriented AI systems spanning self-hosted LLM inference, agent orchestration, voice AI, Python services, and Kubernetes-based deployment for privacy-sensitive operations.

KPMG AG

2025–2026

Consulting, Data Science & Analytics — Led full-stack delivery of interactive research software using Python, FastAPI, Angular, and automated testing; co-owned application architecture, stakeholder workshops, agile planning, and AI pricing advisory.

Saarland University

2024–2025

Research Assistant — Developed transformer-based molecular embeddings and Python data pipelines for computational drug discovery; automated HPC simulation workflows for reproducible research.

KuppingerCole Analysts AG

2021–2024

Frontend Web Developer — Built and maintained Vue.js, Astro, and TypeScript applications; improved software architecture, testability, and maintainability through refactoring, reusable components, and package-based modularization.

Education sector clients

2019–2021

Independent Full-Stack Developer — Delivered AngularJS and Node.js CMS, blog, and document-management systems for school staff, covering requirements gathering, database design, deployment, maintenance, and support.

Technical skills

AI and data: Python, FastAPI, vLLM, LiteLLM, LangGraph, LangChain, Qdrant, Pandas, Polars, TensorFlow

Platforms and operations: Kubernetes, K3s, Docker, Podman, Ansible, PostgreSQL, Redis/Valkey, RabbitMQ, GitHub Actions

Product engineering: TypeScript, Node.js, Angular, Vue.js, Astro, React, REST APIs, testing, CI/CD

Education and languages

B.Sc. Physics, top 5% of class, Saarland University, Germany (2024)

Languages: German (native), Swiss German (native), English (fluent), French (basic)

Selected client and project information is included with permission. Further project detail and references are available on request.
